

# Free Metal Scrap Removal in the Finger Lakes

I recently took advantage of a **free metal scrap removal service** to get rid of some metal stuff that we no longer wanted around. **JayJay and Chance** (two brothers) started a scrap metal business since they were needing to produce income after the COVID affected most employment options in the Finger Lakes Region of New York State. They did an excellent job of removing an old wood stove, old freezer, broken exercise bicycle, assorted old lawnmowers, broken bicycles, old kitchen sink, broken water pumps, and assorted metal pipes. They took things that were just sitting around in our barn and cellar after we had done house renovation several years ago. Yep – been trying to deal with years of accumulation of stuff around the house and barn. It's gone now and they earned a few dollars for thier time and effort.

They are just starting up in business and helped me out a great deal. I would recommend to call them to see if they can help you with their free service of removing metal scrap.

Check out their web site for more details.
