Generate Press

I renewed my **[Generate Press Pro](#)** subscription and it is still a favorite in my "stack of tools" for web design and development. You can't beat the price for a great tool. I started with the free version a couple of years ago and have supported **Tom Usborne**, Founder of Generate Press, by sharing recommendations and reviews when I am asked. It continues to be solid clean code in a lightweight theme.

GeneratePress is a free WordPress theme that focuses on speed and usability. In addition to the free theme, they provide a premium plugin that extends the theme, adding more options to help you build your websites.

Since the beginning, [GeneratePress](#) has aimed to be a lightweight foundation that can tackle any website project. It aims to offer just the right amount of customization, while staying incredibly light and stable.

When I use GeneratePress in a site I feel confident that the code behind me(or my clients) websites are stable, secure and optimized. I don't have to worry about bad code or alot of bloat slowing down things.

GeneratePress has proven to be one of the most stable, best-supported WordPress themes available.

When I have needed tech assistance when I ran into a customization or coding issues I have gotten it quickly resolved in a very helpful manner. I do not hesitate to recommend that you use [GeneratePress](#) for a free theme or for the paid Pro version.
