

New Automator Plugin from Thrive Themes Released

Thrive Automator is a workflow automation tool, that interconnects all Thrive Suite plugins with each other and with 3rd party plugins and services. Released in August 2021.

Each **Automation** consists of a trigger and an action (along with optional filters and delays) that allows backend functionality to intelligently pass data when unique conditions are met.

Although the new plugin stole was just released in August, another 5 new features slipped into Thrive Suite, focusing on increased design flexibility, ecommerce, and website speed.

So thankful that I support and use [ThriveThemes.](#)
