

Password Managers – What to use?

Security is so very important. There are so many choices of password managers to choose from. It's overwhelming for sure. Looking forward there seems to be trend to be password-less but passwords are still important to be protected.

The password manager tool that I have used for years has notified me that they will no longer be developing updates for their product and that I need to explore and find a different manager. DRAT!! They have recommended a replacement and have shared a list of options from other providers. Change is so hard when for years you have been very pleased with what you used and never had issues with.

So I am currently testing out a couple of different suggested options to see what I can replace it with.

Will post my progress as I compare features and ease of use.
